

In the last two years we modernised and expanded our portfolio of cameras and accessories.

A new housing design allows to have smaller cameras and we even improved the shielding.

Besides the <u>HDCam6ECP</u>, our economic version, and the very compact <u>HDCam5</u>, we also got a new high quality camera <u>HDCam75</u>, the new IRThermo6 and a new IP camera, the <u>IPCam72</u>.

NEW RANGE 2024

The new <u>PT61</u> pan-/tilt unit is using only 12 VDC, this additionally saved space. PT61 now offers speed control, local control and presets.

The power supply **PSM41**, although offering two outputs, was reduced in size and it accepts a wide range of voltages from 110 V @60 Hz to 230 V @50 Hz. Industry standard M12 cabling makes connections more flexible.

There is a new release of <u>PECOS</u> Event as well.

Please view the <u>PECOS demo video</u> to get an impression of the versatility and ease of use of our control software.
